

Letter of support

To whom it may concern:

With the following letter, Inmaculada Fortuño Cortés, director of the "San Llorenç" Residence for the Elderly and social-health care centre, I express our willingness to collaborate with the project "**Architecture for Personalized Multimodal Body Computer Interfaces**" as a case study for the personalised assistance devices for the elderly resulting from the research of the aforementioned project.

The Sant Llorenç 3rd Age Residence is defined as an open gerontological centre for personal development and interprofessional socio-health care in which elderly people live temporarily or permanently. Its general objective is to facilitate the maintenance of the autonomy of the elderly person. This objective is fully aligned with the aim of improving the quality of life and promoting the autonomy, communication, and social integration of older people that this project pursues.

Yours sincerely,

**RESIDENCIA
SANT LLORENÇ**
