**LETTER OF INTEREST**

The mission of Fundacja Szkoła Medialna is supporting the development of the information society and promoting access to information and the Internet and developing students' and teachers' competences in applying new technologies.

We are involved in projects related to learning programming, the use of new technologies including AI, VR, AR in education, science and business.

Our Organization is very much interested in the development of novel Brain Computer Interfaces using advanced AI methods. Such a technology will be important from our perspective as methodological tool in the education of children and youth.

We hereby declare that, considering our prior cooperation with prof. Paweł Węgrzyn and Grzegorz J. Nalepa from the Jagiellonian University, Fundacja Szkoła Medialna is potentially interested in cooperation with the international consortium developing the project Architecture for Personalized Multimodal Body Computer Interfaces submitted to the CHIST-ERA 2020 Call in the Advanced Brain-Computer Interfaces for Novel Interactions (BCI) area.

On our part, we declare possible opportunities for sharing domain knowledge in our area of expertise at the stage of consulting the considered use cases and the evaluation of resulting AI models. We are also looking forward for potential opportunities of future exploitation of project results and applications in our Organization.

Ewa Mauer

Chairman of the Board
