Random Forest sp. z o.o.

Rakowicka 1

31-511 Kraków

LETTER OF INTEREST

The mission of Random Forest is to help companies automate data extraction from unstructured documents.

Since 2020, Random Forest has been involved in two highly innovative projects co-founded by the National Centre for Research and Development in Poland. Random Forest is very much interested in the development of novel Brain Computer Interfaces using advanced AI methods. Such a technology will be important from our perspective to improve user experience and increase user engagement in our systems.

We hereby declare that, considering our prior cooperation with prof. Paweł Węgrzyn and Grzegorz J. Nalepa from the Jagiellonian University, Random Forest is potentially interested in cooperation with the international consortium developing the project *Architecture for Personalized Multimodal Body Computer Interfaces* submitted to the CHIST-ERA 2020 Call in the *Advanced Brain-Computer Interfaces for Novel Interactions (BCI)* area.

On our part, we declare possible opportunities for sharing domain knowledge in our area of expertise at the stage of consulting the considered use cases and the evaluation of resulting AI models. We are also looking forward for potential opportunities of future exploitation of project results and applications in our Company.
